WORK EXPERIENCE

Fabregues Motosports SL.   23/01/2021 — 31/07/2021

Internship as a junior web manager

During my time working on Fabregues i was in charge of adding seasonal and new products information to the online shop and working on a few graphic UI features(adding a few buttons and functionalities with react/js) for the front-end team.

QUALIFICATIONS

I enlisted to a small course about big data and machine learning with python (300 hours) I alway have been intrigued in how IA works so in this course i learned some of the basics of data science and IA management.

I have a few amateur projects i like to do on my free time and I have contributed to some of my friends repositories in Github.

EDUCATION

Middle grade about Computing systems and networking   14/09/2018 — 25/06/2020

Instituto del Ebro

In the first year of this course i learned the basics about computing science and networking. For that i learned how to work and manage different OS regardless of it being server-sided or client-sided (with and without GUI). By the second year i learned about how to create and configure my own domain with linux-server and windows server virtual machines. For the final project I made a google maps app wannabe with html/css/javascript and firebase.

(Superior grade) Multiplatform software development(DAM)   15/09/2020 — 25/06/2022

Instituto del Ebro

In the first year of this course i learned the basics of OOP with Java and python. In the second year I learned about how relational databases work and how to implement basic forms of data into them. I learned about data structures and how to make clean, scalable and efficient code.

INTERESTS

I am a very open-minded person that never says no to a good challenge if i'm able to accept it. I've been on my own since a pretty young age so i started learning to adapt and overcome most of the situations life has put me through. I would like to say that i am a proactive person that has no fear to ask if i don't undersant any aspect of the problem i'm facing.

My motivations are based on curiosity and knowing how things i am not familiar with work. I consider my learning path a delightfull journey at the end of the day, even if it's difficult or complicated i like to look forward to be prepared for what comes next.

In my free time i ususally do pair-programming with a close friend, he shows me what he does in his full time developer job and what features or kind of work he's used to. Also we usually start amateur projects to learn together how to get started in some coding languages or how to use some syntax features for those.
